

Figure S1: *daf-2* L1s have an increased survival span compared to wild type (+) at 25 °C (a non-permissive temperature) (A) and a slightly increased survival span at 22.5 °C (B). At a permissive temperature (15 °C), however, there is no difference between *daf-2* and wild type (C). The results are representative of three independent experiments. *** $p < 0.001$, NS: not significant.

A. 25 °C

B. 22.5 °C

C. 15 °C
