

**Table S2**

genotypes	young adults	≤ L4s	total
+	119	59	178
<i>aak-2 (rr48)</i>	0	205	205
<i>aak-2 (ok524)</i>	0	286	286

**Table S2:** After 5 days of starvation as L1, *aak-2* mutants develop slower than wild type. L1s were starved for 5 days then fed to grow. After 52 hours of feeding, the gonad development was used to confirm adulthood. Neither of two different *aak-2* alleles reached adulthood after 52 hours of feeding from L1s, whereas about 67% of wild type reached adulthood. The result is representative of three independent experiments.
