

**Table S2: Regression analyses for associations between disability states and income earned, pain inference with work, dissatisfaction with life, and hours worked on farm**

| <b>Logistic Regressions</b>                      | Odds Ratio | S.E. | $\chi^2$ | Pr > $\chi^2$   |
|--------------------------------------------------|------------|------|----------|-----------------|
| <i>Do something to earn income in past week</i>  |            |      |          |                 |
| Healthy (ref.)                                   | 1.00       | –    | –        | –               |
| Mod. Limited                                     | 0.95       | 0.08 | 0.10     | 0.76            |
| Sev. Limited                                     | 0.49       | 0.13 | 7.62     | 0.01            |
| <i>Pain interfered with work in past 4 weeks</i> |            |      |          |                 |
| Healthy (ref.)                                   | 1.00       | –    | –        | –               |
| Mod. Limited                                     | 4.93       | 0.08 | 89.67    | <.001           |
| Sev. Limited                                     | 11.76      | 0.15 | 65.49    | <.001           |
| <i>Somewhat/very unsatisfied with life</i>       |            |      |          |                 |
| Healthy (ref.)                                   | 1.00       | –    | –        | –               |
| Mod. Limited                                     | 2.55       | 0.13 | 13.40    | <.001           |
| Sev. Limited                                     | 8.88       | 0.17 | 40.90    | <.001           |
| <b>OLS Regression</b>                            | Estimate   | S.E. | <i>t</i> | Pr >   <i>t</i> |
| <i>Hours Worked on Own Farm in Past Week</i>     |            |      |          |                 |
| Healthy (ref.)                                   | –          | –    | –        | –               |
| Mod. Limited                                     | -0.96      | 1.20 | 0.80     | 0.42            |
| Sev. Limited                                     | -5.32      | 1.71 | 3.11     | <.001           |

*Notes:* Estimates control for age, age2, and gender and account for clustering of standard errors at region and village levels.
