

Std CO-Mo 8ng

Figure S3. Results of standard control MO injections in *Xenopus* embryos. Injections of 8 ng of MO does not produce reduction in the expression of *Xotx2* (A-C), *nrp-1* (D-F) or *Twist* (G-H) on the injected (inj) side of embryos compared to control (un) side. No reduction of pharyngeal skeleton is observed on the injected side in swimming larvae (I) compared to uninjected side. β -gal red staining traces injected side of embryos.
